

Digital Broadcasting

Private or public broadcasting system

Encoder/Transmitter

Internet radio IR355

Nabishi Digital Broadcast Ltd are pleased to introduce the world's first and unique Internet Broadcast System which as well as being Digital, has no limitations whatsoever in the range or distance of broadcast, in fact your broadcasts will be heard wherever there is Internet.

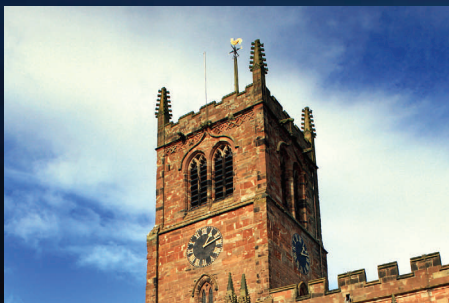

With significant advances in Internet technology, broadcast to your listeners is not only affordable but you can transmit your message to private or public audiences, including religious, community radio and business broadcasts, to anywhere in the world.

Our unique Internet Digital Broadband System transmits Digital voice to unlimited distances and because it is digital, the sound reproduction is outstanding. There is a choice of two, feature-packed, Internet radios which can receive thousands of radio channels from anywhere in the world. Call us for a free demonstration.
